

MODULE 1 Self-Introduction

SAMPLE INTRODUCTION

- * Name
- * Educational background
- * Branch & Year
- * Technical skills
- * Projects/Internships
- * Strengths/Unique Qualities
- * Achievements
- * Career goal
- * Why should a recruiter hire you?

My name is Shrey Ashok Fulbandhe, and I'm from Bhandara district, a beautiful district in Maharashtra, widely known as the '*Rice Bowl of Maharashtra*'. I come from a nuclear family; my father is an LIC agent, and my mother is a homemaker. I will be the first engineer in my family, and that responsibility has always fueled my passion, confidence, and motivation to grow in this field.

Currently, I'm pursuing my final year of B.Tech in Electrical Engineering from Marathwada Mitra Mandal's College of Engineering, Pune. My academic journey has been shaped by curiosity and the desire to prove myself as an engineer.

Professionally, I've completed two internships: one in PCB testing and inspection, and another focused on DC motor operations. These experiences helped me understand how engineering actually feels beyond textbooks.

I am also working on my final-year project, Design and Development of an Electric Vehicle Prototype with Custom Battery Pack and BMS, which is helping me explore the future of electric mobility.

My technical skills include PCB testing and inspection, DC motor operations, basic electrical circuit design and troubleshooting, battery management systems, and electric vehicle technologies. I am also comfortable using **MATLAB, AutoCAD Electrical, MS Excel, and Microsoft PowerPoint** for analysis, documentation, and presentations.

Beyond academics, I've always enjoyed taking responsibility—As I've also served as the treasurer of our Electrical Engineering Student Association (EESA) Club and

participated in different technical activities. These experiences helped me grow as a communicator and a team player.

Apart from my technical abilities, I enjoy public speaking, collaborating with diverse teams, learning about emerging technologies, and continuously improving my communication and presentation skills. In my free time, I enjoy reading about innovations in electric vehicles, exploring new technology trends, and participating in technical discussions and workshops.

If I am given an opportunity to be a part of your organization, I will bring dedication, a strong learning mindset, and the willingness to contribute wholeheartedly. As a fresher, I may not know everything, but I am confident in my ability to learn quickly, adapt to new environments, and deliver my best while growing with the organization.

That's all about me. Thank you so much.

MODULE 2: Everyday Workplace Communication : Colloquial English (Spoken Conversation)

Short Skit Situations

1. "The Credit Thief"

Your team completed a project, but during the client presentation, one team member takes all the credit.

Situation

Roles

- Team Leader
- Employee A (who feels ignored)
- Employee B (takes all the credit)
- HR/Manager

Learning: Handling conflict professionally, giving feedback, assertive communication.

2. The Interview Panel

A candidate is applying for a Graduate Engineer Trainee position.

Situation

Roles

- HR
- Technical Interviewer
- Candidate

Ask questions like:

- Tell me about yourself.
- Describe a challenging project.
- Why should we hire you?

Learning: Interview communication and confidence.

3. "Your Manager Gives Impossible Work"

Situation

At 5:30 PM, your manager asks you to finish a task before leaving.

Roles

- Manager
- Employee

The employee already has another urgent assignment.

Learning: Negotiating deadlines politely.

4. Client Doesn't Like Your Work

Situation

The client rejects your first prototype.

Roles

- Client
- Project Manager
- Engineer

The team must respond professionally instead of becoming defensive.

Learning: Active listening and customer handling.

5. Fresh Graduate's First Day

Situation

A fresher joins the company and meets colleagues.

Roles

- HR
- Team Lead
- Senior Employee
- Fresher

Practice introductions and networking.

Learning: Professional introductions.

6. Convince Your Manager

Situation

You have an idea that can improve productivity, but your manager is skeptical.

Roles

- Employee
- Manager

Convince the manager using logic.

Learning: Persuasion.

7. The Office Meeting

Situation

Your project is behind schedule.

Discuss:

- What went wrong?
- What's the recovery plan?

Roles

- Project Manager
- Developers
- QA
- Client Representative

Learning: Reporting progress.

8. "You Found a Bug Before Launch"

Situation

One hour before product launch, a major bug is discovered.

Roles

- QA Engineer
- Developer
- Project Manager
- Client

Decide whether to launch or delay.

Learning: Decision-making under pressure.

9. Salary Negotiation

Situation

You receive a job offer.

Negotiate respectfully.

Roles:

- HR
- Candidate

10. Cross-Cultural Team

Situation

Your teammates are from India, Germany, and Japan.

Different communication styles create misunderstandings.

How do you solve them?

11. Intern vs Senior Engineer

The intern has a brilliant idea.

The senior dismisses it.

Can the intern present the idea confidently and respectfully?

12. Team Building Activity

Your company has ₹1,00,000 for employee engagement.

Choose ONE:

- Office outing

- Cricket tournament
- Training program
- CSR activity
- Gaming competition

Reach consensus.

13. New Idea Pitch (Shark Tank Style)

Pitch a startup idea to three investors.

Roles:

- Founder
- Investors

The investors ask difficult questions.

14. Coffee Machine Conversation (Networking)

Two employees from different departments meet for the first time.

Conversation should include:

- Introductions
- Current projects
- Career goals
- Shared interests

SAMPLE SCRIPT

Role Play: The Deadline Dilemma

Duration: 10 Minutes

Characters: Sarah (Project Manager), Rahul (Software Developer), Priya (QA Engineer), Arjun (Client Representative), Neha (Intern)

Scenario

Your company is developing an **Attendance Management System** for a client. The software is scheduled to be delivered tomorrow morning. However, there are still critical bugs, one module is incomplete, and the client has requested an additional feature. The Project Manager has called an emergency meeting to decide the next course of action.

Sarah (Project Manager): Good morning, everyone. Thank you for joining this meeting at short notice. As you know, we are scheduled to deliver the Attendance Management System tomorrow morning. Before we decide our next steps, I'd like each of you to provide a quick status update. Rahul, could you please begin?

Rahul (Developer): Good morning. I've completed approximately 90% of the development work. The attendance report module is still under development, and I estimate it will take another four hours to complete.

Sarah: Thank you, Rahul. Priya, could you update us on the testing progress?

Priya (QA Engineer): We've completed most of the testing, but we've identified six critical bugs. The login page occasionally fails, and the attendance calculation is producing incorrect results. Releasing the software in its current state would not be advisable.

Sarah: Thank you for the update. Arjun, has the client shared any new requirements?

Arjun (Client Representative): Yes. I spoke with the client this morning. They have requested an additional feature—an automated monthly attendance report. They would like it included in tomorrow's delivery.

Rahul: I'm afraid adding a new feature at this stage isn't practical. We are already working hard to complete the pending module, and introducing new functionality could delay the project.

Arjun: I understand your concern, Rahul. However, the client considers this feature important, and they may not be satisfied without it.

Priya: From a quality perspective, I believe fixing the critical bugs should be our highest priority. Delivering software with major issues could affect the company's reputation.

Rahul: I completely agree. We should focus on stability before adding new features.

Sarah: Thank you, everyone. I appreciate the different perspectives. Instead of focusing on the problem, let's discuss possible solutions. Neha, you've been listening carefully. Would you like to share your thoughts?

Neha (Intern): Thank you, ma'am. I have a suggestion. We could deliver the core application tomorrow after fixing the critical bugs and completing the pending module. We can inform the client that the automated monthly report will be delivered as part of the next software update.

Rahul: That's actually a practical solution. It allows us to meet the deadline without compromising quality.

Priya: I agree. It will also give us enough time to complete proper testing before releasing the new feature.

Arjun: I think the client would appreciate an honest explanation and a clear delivery plan. I'll communicate this proposal to them.

Sarah: Excellent. I'm glad we've reached a consensus. Here's our action plan. Rahul, please complete the remaining development by 3:00 PM. Priya, prioritize fixing the critical bugs and complete testing by 5:00 PM. Arjun, please inform the client about the phased delivery plan. Neha, I'd like you to support both the development and QA teams wherever required.

Rahul: Certainly. I'll complete the development as planned.

Priya: I'll ensure that all critical issues are resolved before the end of the day.

Arjun: I'll contact the client immediately after this meeting and explain our plan.

Neha: Thank you. I'll coordinate with both teams and provide any assistance required.

Sarah: Wonderful. Thank you, everyone, for your valuable contributions. Today's discussion showed excellent teamwork, professionalism, and problem-solving. Let's stay focused and deliver a quality product. Have a productive day.

Everyone: Thank you.

Learning Outcomes

- Reporting progress professionally
- Participating effectively in meetings
- Polite disagreement
- Active listening
- Consensus building
- Decision-making under pressure
- Professional workplace vocabulary and etiquette

MODULE 3 - Group Discussion

Group Discussion Topics:

1. Artificial Intelligence (AI): Transforming the Future of Work
2. Can Artificial Intelligence Replace Software Engineers?
3. Work from Home vs Work from Office: The Future of Workplace Culture
4. Start-ups vs Corporate Careers: Which is a Better Choice?
5. Communication Skills: A Key to Employability and Career Growth
6. Social Media: Empowerment or Distraction?
7. Mental Health and Well-being Among Engineering Students
8. Climate Change and the Role of Sustainable Development
9. Electric Vehicles: The Future of Sustainable Transportation
10. Cybersecurity and Data Privacy in the Digital Era
11. Skills vs Academic Qualifications: What Matters More in Today's Job Market?
12. Gender Diversity and Inclusion in the Workplace
13. Digital India: Opportunities and Challenges
14. Leadership and Teamwork in Professional Success
15. Innovation and Critical Thinking: Driving the Future of Engineering
